

V3 Testnet Addresses

The Aave Protocol V3 is available on the following testnets:

- Ethereum Sepolia
- Arbitrum Görli
- Avalanche Fuji
- Optimism Görli
- Scroll Sepolia
- Fantom Testnet
- Polygon Mumbai
-

Integrate contract addresses in solidity or via npm package with the [Aave Address Book](#) . For assets on testnets, a custom deployment of each token is used to ensure enough liquidity for reserves and to easily mint more tokens when needed. All deployments now use an open faucet with a per-tx limit of 10000 tokens per mint transaction. Contract Naming 1.) Primary contracts for integrations

- Transaction methods: Pool (listed asPool-Proxy
- below)
- Data methods: PoolDataProvider, UiPoolDataProviderV3, UilncentiveDataProviderV3
-

2.) Name changes from V2 -> V3:

- LendingPool -> Pool (listed asPool-Proxy
- below)
- LendingPoolAddressesProvider ->PoolAddressesProvider
- ProtocolDataProvider ->PoolDataProvider
-

3.) Functions with areserve address parameter refer to the the underlying token i.e. GHO token address. Underlying token addresses are under theMintable Reserves and Rewards section
Click through the tabs to get addresses of the deployed contracts on various chains.
