

Think we need more discussion regarding the Fee Switch, but in the context of what it can bring to Uniswap as a whole.

One purpose of the fees would be to subsidize new pool creation. With v3, creating a new pool yesterday was 0.33 ETH. This is a large upfront cost for the initial pool creator to bear; however, this could be recouped.

By turning on Fees, we could allow for the first 0.33 ETH worth of fees to be used to payback the pool creator.

Benefits:

1. Eliminates barrier to entry for new pools
2. By using the fee accruals of that specific pool, it requires activity and prevents random 0 liquidity pools being spun up to game the system
3. Allows a broad diversity of pools to be created which would otherwise not exist
4. Fee accrual for UNI holders

It's about time to give this serious thought and take action as a governance community.

Thoughts?
