

Hi,

I'm working with a [public repo](#) I created for the enigma-discovery CLI getting started guide.

Github warned me that there's a [security vulnerability](#) in lodash

, which is coming from the jayson@2.1.2

dependency used by `enigma-js@0.0.5`

. Just wanted to give a heads up in case it's possible for Enigma to update their version of jayson

to solve the issue. I'm not sure if it's possible for end users depending on enigma-js

to override the lodash

dependency version themselves.

```
→ enigma-discovery git:(master) npm ls lodash myproject@1.0.0 /Users/dwarrier/WebstormProjects/enigma-discovery
├─┬ enigma-js@0.0.5 ─┬─ jayson@2.1.2 ─┬─ lodash@4.17.11
```
