

I claimed my SEFI tokens today in both my Metamask wallet that is connected to the bridge and the SEFI tokens in my Keplr Wallet that is connected to the bridge. I turned around and staked the SEFI tokens in my Keplr Wallet. Is there a reason I need to hold the SEFI Metamask tokens in that wallet too or can I move them to Keplr and stake them as well? Do I need SEFI tokens on both sides of the bridge for some reason?

Thanks!
