

Hi everyone, created a simple SUAPP for SUAVE. Introducing Arena X

, an MEV application that takes orders from users on any chain that supports Uniswap's Universal Router. I shared the project [here](#) for those of you who are interested in learning more.

TLDR:

1. Supports intents from multiple chains
2. Intents can encompass any combination of token swaps / transfers / wraps / etc. since the Order format is based on Uniswap's Universal Router

Still a lot of work to do on this (building profitable blocks based on multiple bids, chain ids, etc.), but we gotta start somewhere!

Reach out if you want to learn more / collaborate.

Thanks,

M
