

Is there an updated guide, using: <https://build.scrn.network/validators-and-full-nodes/setup-sgx.html>

Been able to 'fix' the release numbers and all. But when I get to some steps, seem to hit a wall.

Such as: >secret init-enclave

Returns an error (unknown command).

I guess I'm looking for either an updated guide to get started and/or doc's. Thanks in advance.
