

[Proposal]

Infinity Wallet is the first desktop non-browser-extension DeFi & Web3 wallet, supporting over 150,000 users and used to secure over \$400,000,000 of digital assets.

More information regarding the Infinity Wallet can be found below:

- Information Deck: <https://infinitywallet.io/docs/Infinity%20Wallet%20Deck.pdf>
- Documentation: <https://docs.infinitywallet.io/>

[Proposed integration]

We are requesting the integration of Infinity Wallet into the Aave App to allow for easier onboarding of users to Aave with the Infinity Wallet. The changes required only affect the Aave Connect Module, and the code changes have been submitted in a Pull Request on GitHub.

[Current and proposed integration of Aave in the Entity ecosystem]

We have already added support for Aave as a default DApp in the Infinity Wallet Browser-less DApps & Web3 feature. By complementing the integration on your side through adding our connector, this will allow our users to easily discover and 1-click connect to Aave directly within the Infinity Wallet. Providing a wide range of benefits to both Aave and users alike.

[Technical integration]
