

Hi Ethereum Researchers,

My colleagues and I have recently started a Javascript implementation of the beacon chain based on the Ethereum team's Python implementation.

As a result, we want to share a list of implementations in different programming languages so that those interested can help in the implementation and ideation of a beacon chain and hopefully bring Casper+PoS+Sharding to Ethereum.

Here's a list:

Javascript: https://github.com/ChainSafeSystems/lodestar_chain

Go: <https://github.com/prysmaticlabs/beacon-chain>

Rust: https://github.com/sigp/rust_beacon_chain

Python: https://github.com/ethereum/beacon_chain
