

# Useful Commands

Here are some useful commands for node operators:

|  |  |
|--|--|
| Command  | Description  |
| <code>cantod keys list</code>  | Lists the names of keys created on your machine                                  |
| <code>cantod tendermint show-node-id</code>  | Shows your node ID   |
| <code>cantod keys show -a --bech val</code>  | Gets your valoper address  |
| <code>curl http://localhost:26657/status   jq .result.sync_info.catching_up</code> | Checks if your node is catching up (query via the RPC, default port 26657)       |
| <code>query slashing signing-info (cantod tendermint show-validator)</code>        | Checks if you are jailed or tombstoned   |
| <code>cantod query slashing signing-infos</code>                                   | Shows blocks your node is missing  |
| <code>cantod tendermint show-address</code>  | Shows your Tendermint consensus address for comparison to the list of validators |
| <code>missing blocks</code>  |  |
