

Querying the Chain

Use the methods in the [rpc \(opens in a new tab\)](#) SDK module to directly query your full node's RPC endpoint.

Example

This code will attempt to query the chain's current epoch:

```
use namada_sdk :: {rpc, Namada };  
  
match rpc :: query_epoch (sdk . client ()) .await { Ok (current_epoch) =>  
println! ( "Current epoch: {:?}" , current_epoch), Err (e) =>  
println! ( "Query error: {:?}" , e), }
```
