

SeriesEpochManager

A helper contract to manage nonce with the series

Functions

epoch

function

epoch (address maker , uint96 series)

public

view

returns (uint256) Returns nonce formaker andseries

Parameters:

Name	Type	Description
maker	address	series uint96

Return values

Type	Description
uint256	Nonce formaker andseries

increaseEpoch

function

increaseEpoch (uint96 series)

external Advances nonce by one

Parameters:

Name	Type	Description
series	uint96	

advanceEpoch

function

advanceEpoch (uint96 series , uint256 amount)

public Advances nonce by specified amount

Parameters:

Name	Type	Description
series	uint96	amount uint256

epochEquals

function

epochEquals (address maker , uint256 series , uint256 makerNonce)

public

view

returns (bool) Checks ifmaker has specifiedmakerNonce forseries

Parameters:

Name	Type	Description
maker	address	series uint256 makerNonce uint256

Return values

Type Description bool True ifmaker has specified nonce. Otherwise, false

Events

EpochIncreased

event

EpochIncreased (address

indexed maker , uint256 series , uint256 newNonce) ; Emitted when epoch increased

Parameters:

Name	Type	Description
maker	address	series uint256 newNonce uint256
