

The distribution was very good, people made money that they could not earn in a year, but the distribution that came to my mind and I wanted should be:

1. The person who made a single transaction and the people who made hundreds of transactions should be separated

For 1-5 transactions: 150 UNI

For 6-10 transactions: 250 UNI

For those who make transactions between 11-50: 500 UNI

750 distributions should have been made to those who made 51 and above transactions.

2.

Only those who made transactions between September 1-15 should receive it this way.

The team can rework on this issue and act as I mentioned in the next distribution.

Dear community members, do you agree with me?

- YES
- NO
