

Redelegate Tokens

A redelegation is a type delegation that allows you to bond illiquid tokens from one validator to another:

...

Copy `secretcli tx staking redelegate \ \ 10 uscr \ --from= \ --chain-id=`

...

Here you can also redelegate a specific `shares-amount` or `shares-fraction` with the corresponding flags.

The redelegation will be automatically completed when the unbonding period has passed.
