

Hi everybody, we are introducing [mev.fyi](#) for MEV enjoyers to [contribute](#) and [fetch content back on data.mev.fyi](#): research papers, blog, articles, YouTube videos, podcasts, Twitter threads [...]. I originally launched the project since I could not find a single location for everything MEV, which made onboarding to the ecosystem more challenging.

We already have contributors to whom I am deeply thankful for joining the journey ([@Fred](#)).

The vision and everything else relevant is detailed in the [README.md](#) of the mev.fyi GitHub repository. We are seeking all research content on the [topics](#) listed by Flashbots.

Do not worry about adding content already referred to in the repo, filtering is taken care of. You can also add your handle to be noted as a referrer should you want to! First contributed first referred

The project seeks contributors for both research and [tooling development](#) to optimize for referencing and fetching content back. For now, research is displayed as a [Google Sheet](#). This is a work in progress.

The current end-goal is to fetch and display research content as an [NFX Chat-like chatbot](#). We are actively seeking to decentralize that project further, and we are welcoming all suggestions aligned with this goal.

Please state any feedback you might have here, in particular around Contribution User Experience. You can also create pull requests or open issues in the [repository](#).

Thank you and we are looking forward to your contributions!
