

\$LYNXx\$GMX: Telegram Leverage Trading Bot

Hi,

I am the founder of [Lynxtech.io](https://lynxtech.io) and I am interested in exploring the opportunity to collaborate with the GMX team on integrating GMX APIs into our existing trading bot, DeadShot.

Proposal

We propose the development of a Telegram trading bot that will seamlessly integrate with GMX's existing platform and provide users with a range of valuable features, including:

- Seamless token purchases - Users can purchase tokens directly within the Telegram app, eliminating the need to navigate to an external website or download a separate app.
- Up to 50x leverage - Users can trade with up to 50x leverage, which means they can control a much larger amount of cryptocurrency than they have in their account.
- Automated trading strategies - Implement automated trading strategies to capitalize on market opportunities and minimize emotional decision-making.

Technical Architecture

The GMX Telegram bot will be built on a secure and scalable architecture that ensures the privacy and security of user information. All communication between the bot and GMX's API will be encrypted. Additionally, the bot will utilize GMX's high-performance APIs to execute commands with lightning speed, ensuring a smooth and efficient user experience.

[Lynxtech.io](https://lynxtech.io) is committed to protecting the privacy and security of our users' data. We will adhere to the following principles:

Data minimization - We will only collect and store the data that is necessary for the operation of the Telegram trading bot.

Data security - All user data will be encrypted and stored on secure servers.

Benefits

The implementation of a Telegram trading bot will provide GMX with several benefits, including:

1. Expanded user base and engagement - Tap into the vast Telegram community and expand your reach to new heights.
2. Enhanced accessibility and convenience - Provide users with the ease of purchasing tokens directly from their favorite messaging app.
3. Streamlined trading process - Eliminate unnecessary steps and make token purchases seamless and efficient.
4. Simplified user experience - Create a frictionless and intuitive user journey, fostering loyalty and satisfaction.
5. Increased trading volume - Attract new users and incentivize existing users to trade more frequently, boosting overall trading volume.

Partnership with [Lynxtech.io](https://lynxtech.io)

In partnership with [Lynxtech.io](https://lynxtech.io), GMX can unlock a new era of accessibility, convenience, and growth. We are committed to providing comprehensive support throughout the development and implementation process, ensuring a smooth and successful launch of the Telegram trading bot. Let's collaborate and revolutionize the way users interact with GMX. Together, we can empower users, expand horizons, and redefine the future of cryptocurrency trading.

I look forward to the opportunity to discuss this proposal with you in more detail.

Thanks,

Mr.CMG - [Lynxtech.io](https://lynxtech.io) CEO
