

In a recent post we previewed the SUAVE Centauri

release defined in the November 2022 roadmap in the [Future of MEV](#). We introduced the MEVM, a powerful modification of the EVM with new precompiles for MEV use cases, and the architecture of the initial release of SUAVE. Further, we detailed how the MEVM allows for the development of new applications that cannot be built on Ethereum today - in particular the transformation of centralized MEV applications into smart contracts on a decentralized blockchain.
