

Of those 1050 features: are there 310 of them, which are identical to the legacy features?

In other words, if I “continue to use the old dataset in the same way”, does that correspond to using some subset of the 1050 features, and also some subset of “4x the number of rows”?

I'd like to use the same 310 columns, but more rows, especially
validation rows. Please advise.
