

Thanks for considering putting yourself forward as an ApeCoin DAO governance delegate! You only need to submit yourself as a delegate if you want to appear in the list of delegates shown in the delegation interface on apecoin.com.

STEP 1: SUBMIT A DELEGATE STATEMENT:

- About Me:

brief headline about yourself (max 2 sentences)

- Reasons for wanting to be a delegate:
- My web3 qualifications / skills:
- What voters can expect of me:

STEP 2 (OPTIONAL): CUSTOMIZE YOUR PROFILE PICTURE

Delegates must own an ENS address in order to customize their profile picture. Read more on how ENS avatars work [here](#).

- Go to app.ens.domains and search for your ENS name
- Make sure you have an ETH Address record set
- Click “ADD/EDIT RECORD” in the Records section
- Add an image URL to the “Avatar” row in “Text Records” (users can link to jpeg/png images via HTTPS, IPFS, or as an NFT).
- HTTPS: MUST resolve to an avatar image directly. URLs must not resolve to HTML pages, metadata, or other content.
- IPFS: MUST resolve to an avatar image directly.
- NFTs: supports ERC721 and ERC1155 NFT types. NFT URL must use the following format: “eip155:1/[NFT standard]:[contract address for NFT collection]/[token ID or the number it is in the collection]”
- HTTPS: MUST resolve to an avatar image directly. URLs must not resolve to HTML pages, metadata, or other content.
- IPFS: MUST resolve to an avatar image directly.
- NFTs: supports ERC721 and ERC1155 NFT types. NFT URL must use the following format: “eip155:1/[NFT standard]:[contract address for NFT collection]/[token ID or the number it is in the collection]”
- Once the image record is entered, scroll down and click “Confirm” to save it to the blockchain

The following examples all resolve to the same avatar image:

- HTTPS URL to IPFS gateway for BAYC token 0 image
<https://ipfs.io/ipfs/QmRRPWG96cmgTn2qSzjwr2qvfNEuhunv6FNeMFGa9bxb6mQ>
- IPFS URL for BAYC token 0

`ipfs://QmRRPWG96cmgTn2qSzjwr2qvfNEuhunv6FNeMFGa9bxb6mQ`

- NFT URL for BAYC token 0

`eip155:1/erc721:0xbc4ca0eda7647a8ab7c2061c2e118a18a936f13d/0`

STEP 3 (OPTIONAL): CUSTOMIZE YOUR PROFILE TO SHOW YOUR ENS NAME

A Primary ENS Name record makes your Ethereum address point to an ENS name. This allows dapps to find and display your ENS name when you connect to them with your Ethereum account. This can only be set by you so it is not set automatically upon registration.

- Go to app.ens.domains and click “My account”
- Select the ENS domain you want to use under the “Primary ENS Name” menu
- Click “Save”

After these steps you're all set to become an ApeCoin DAO delegate!
