

Hey,

I work with PYOR, a blockchain analytics firm backed by Coinbase and Castle Island Ventures. We have worked with protocols like Compound, Tezos, Quickswap, and ICP to build custom analytics dashboards and research reports.

We have worked very closely with the foundation/community to cater to their data needs, as we've realized that there is no one-size-fits-all solution, it varies based on the protocol's stage and needs.

I wanted to check with the Arbitrum community/foundation to understand what metrics/data points you track or would like to track, so we can build dashboards/reports that cover these metrics. I am happy to share our past work so you can gauge our capabilities.

Cheers,
