

I uploaded a jupyter notebook i use to sum up my earnings and get info about stakes - you can find it at [Numerai-Notebooks/Calculate_earnings.ipynb at main · chricke/Numerai-Notebooks · GitHub](https://github.com/chricke/Numerai-Notebooks/blob/main/Calculate_earnings.ipynb)

If you take a look at cell number 8 you can see the call for fetching round stats from numerapi and use it to get per round stats instead of summing it up as i do.
