

Project Setup

Imports

To begin working with the Namada SDK, add the following to your `Cargo.toml` :

namada_core

{ git

```
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } namada_sdk = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" , default-features =  
false , features = [ "std" , "async-send" , "download-params" ] } namada_tx = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } namada_governance = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } namada_ibc = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } namada_token = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } namada_parameters = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } namada_proof_of_stake = { git =  
"https://github.com/anoma/namada" , tag =  
"v0.43.0" } tendermint =  
"0.37.0" tendermint-config =  
"0.37.0" tendermint-rpc = { version =  
"0.37.0" , features = [ "http-client" ] } tendermint-proto =  
"0.37.0" tokio = { version =  
"1.0" , features = [ "full" ] }
```
