

Hi DyDx team,

I'm currently facing an issue while attempting to set up a DyDxV4 full node on my local environment using an existing snapshot. The node appears to sync correctly until height 1805000, but afterward, it encounters the following error:

Error Message:

```
ERR error on catchup replay; proceeding to start state anyway err="cannot replay height 1805001. WAL does not contain #ENDHEIGHT for 1805000"
module=consensus 12:22PM INF Timed out dur=-1518.654117 height=1805001 module=consensus round=0 step=1 12:22PM INF received proposal

```

It seems to be stuck at this point, and the logs indicate issues related to consensus and block validation.

Here are some additional logs:

```
8:08AM INF Ensure peers module=pex numDialing=0 numInPeers=0 numOutPeers=10 numToDial=0 8:09AM INF Ensure peers module=pex numDialing=0
numInPeers=0 numOutPeers=10 numToDial=0 8:09AM INF Ensure peers module=pex numDialing=0 numInPeers=0 numOutPeers=10 numToDial=0 8:10AM
INF Saving AddrBook to file book=/root/.dydxprotocol/config/addrbook.json module=p2p size=387
```

Node syncing successfully until height 1805000 and failed to sync beyond this point

I would appreciate any assistance or guidance you can provide to resolve this issue. Thank you for your attention to this matter.
