

Hi there, I have a problem.

I'm trying to send a bundle of transactions in a single block.

I have two accounts:

- the first one has 100 USDC
- the second one has 10 USDC.

The first transaction in the bundle should send 10 USDC from the second account to the first. Then I tried to send all 110 USDC in a third party smart contract.

However, when I tried to simulate this bundle, I got an error in the second transaction that said ERC20: transfer amount exceeds balance

.

This worked perfectly two weeks ago, what happened now?
