

Hello,

Aave V3 is designed to embrace the multiverse vision and works best on multiple networks.

That being said, bandwidth is not infinite and not all networks are equally secure or worth.

as we're experiencing more and more demands to host Aave V3,

I think the governance might want to consider standardization of the process.

Here's a proposal for a framework that is open to community discussions.

## **Title [ARC] - Deploy Aave V3 on [Network]**

### **[Proposal]**

Brief presentation of the network and ecosystem 250 words max

### **[Technical Specifications]**

Brief technical presentation of the network including

- the number of nodes, if the network is an L2 how does anchoring on L1 work?
- consensus mechanism
- Infrastructure presence : does Chainlink, Thegraph and Etherscan support the network?
- Ecosystem presence: Does Curve and an AMM/Dex are present?
- L2 or alt-L1
- presence or not of a messaging system allowing smart-contract communication between Eth L1 and the network (Needed for cross-chain governance)
- is the network EVM compatible?
- what are the most common public RPCs?
- does your network testnet has a Faucet? does your mainnet has one for the native asset?
- relevant data

### **[Proposed list of initial collaterals]**

a list of proposed starting collateral on Aave V3

- Does the network has chainlink Price Feeds or is it in contact with Chainlink to deploy feeds for these assets?
- do these assets have 30 days 2M\$ daily volume minimum?
- liquidity of these assets on main DEXs
- main DEXs of the network

### **[Incentives]**

Short brief if the network wants to do a Liquidity Mining program and include Aave V3 in it.

### **[Audits & Security]**

- List of relevant security audits of the network
- Has the network experienced outages, downtime or exploits/hacks?

If yes:

- How many outages/downtime has your chain experienced in the last year? Please list the 5 last occurrences with dates and explanations
- How long was the longest downtime?

- What were the main issues & have they been resolved?

Governance process :

1. create a compliant with this framework post in the governance forum
2. after a minimum of 5 DAYS, create a snapshot vote on Aave snapshot with a clear yes, no, and abstain option and reach a quorum of 150k AAVE votes in total

I invite the community to provide feedback on this proposal and once consensus is reached, a snapshot vote will be created to ask for the adoption of this standardization.
