

Transaction Explorer

LI.FI provides its own explorer to make the status of a transaction transparent to your users.

LI.FI's Transaction Explorer

<https://explorer.li.fi>

Dynamically link to a specific transaction

You can easily append any transaction hash to <https://explorer.li.fi/tx/{tx-hash-id}>

Example: <https://explorer.li.fi/tx/0x7c23137c7a251a2b58875d9968572cc3586640857b82152fabadd26eef108ab8/>

Get the explorer link directly from the API

Our API returns the explorer link directly with each transaction when [Status of a Transaction](#)

When calling the https://apidocs.li.fi/reference/get_status endpoint, the property `li.fiExplorerLink` is returned, which you can use to link users to the explorer.

The explorer is a rendered version of the status response.
