

Hello,

New to the site so understand this may be a common issue. I took out around 20 positions on Aave V1 a few years ago (deposits and loans) and they boomed soon after. When Aave V2 came out Eth fees had gone stupid and I was unable to migrate. It was going to cost over \$1000. So now I am hearing about V3 I am concerned about what to do. Are my funds at risk if I leave them in V1 of the community closing that protocol? Will there be bridge between V1 to V3? And is it likely with Eth 2.0 the fees will become more reasonable for migrating? Any assistance appreciated.
