

Choose a Network

This page explains how to switch between networks in Maverick's dApp. Click the network name in the top right to change networks. The Maverick dApp is live on both the Ethereum Layer 1 and zkSync Era Layer 2 blockchain networks. Switching between these networks is as simple as clicking the network name in the top right of your screen and selecting the other network from the drop-down menu. Confirm the network change in your wallet app and you're ready to go!
