

# Installing PnP iOS SDK

## Swift Package Manager

To install the Web3Auth SDK using Swift Package Manager, follow the below steps:

1. In Xcode, with your app project open, navigate to File > Add Package Dependencies
2. .
3. When prompted, add the Web3Auth iOS SDK repository:
4. <https://github.com/Web3Auth/web3auth-swift-sdk>
5. From the Dependency Rule
6. dropdown, select Exact Version
7. and enter 7.5.0
8. as the version.
9. When finished, Xcode will automatically begin resolving and downloading your dependencies in the background.

## Cocoapods

To install the Web3Auth SDK using Cocoapods, follow the below steps:

1. Open the Podfile, and add the Web3Auth pod:

`pod 'Web3Auth', '~> 7.5.0'` 1. Once added, use `pod install` 2. command to download the Web3Auth dependency.

## Configuration

To use Web3Auth you need to provide your Web3AuthClientId to the SDK.

- Go to [Web3Auth Developer Dashboard](#)
- , and create or open an existing Web3Auth project to copy your Client ID from Project Details.
- `Whitelist(bundleId)://auth`
- in the developer dashboard. This step is mandatory for the redirect to work. [Edit this page](#) [Previous Web3Auth PnP iOS/Swift SDK Next Initialize](#)
