

As you know, blockchain is not the only decentralized system in the world. There are many other systems with varying degrees of decentralization, and I think by studying them we as decentralized system designers can gain a lot of valuable insights.

Here are some examples of non-blockchain decentralized systems:

- Popular: email, bittorrent, X.509...
- Esoteric: Secure Scuttlebutt, Urbit, Upspin...

I'm thinking about starting a virtual study group that focuses on these systems. Would anyone here be interested in joining?

EDIT: Join this telegram group if you are interested in joining: <https://t.me/joinchat/IF2X-xMGU6lwfLRooWyFpg>
