

# [ARFC] Onboard slisBNB to Aave V3 on BNB Chain

**Author: ACI**

**Date: 2024-07-25**

## Summary

This proposal seeks to onboard slisBNB, a tokenized version of staked BNB introduced by Lista DAO, to Aave V3 on the BNB Chain.

## Motivation

slisBNB is a Liquid Staking Token (LST) from ListaDAO, which aims to bring additional liquidity and utility to staked BNB. The token allows users to participate in the staking rewards while maintaining the flexibility to use their staked assets within the DeFi ecosystem.

Onboarding slisBNB will allow Aave users to utilize it as collateral, thus broadening the asset base and enhancing overall liquidity.

## Proof of Liquidity and Deposit Commitments

Users who supply slisBNB liquidity on Aave, will be eligible to get stardust (points) from Lista's ongoing point system Cosmic Adventure Challenge Season 3, which will turn to LISTA token airdrop when Season 3 ends.

## Specification

Token Name: slisBNB

Underlying Asset: Staked BNB

Contract: 0xB0b84D294e0C75A6abe60171b70edEb2EFd14A1B

Initial Risk Parameters and analysis will be provided by Risk Service Providers and ARFC will be updated accordingly.

## Next Steps

1. Publication of a standard ARFC, collect community & service providers feedback before escalating proposal to ARFC snapshot stage.
2. If the ARFC snapshot outcome is YAE, publish an AIP vote for final confirmation and enforcement of the proposal.
