

1. how to proof the safety of eigenlayer on tech side and tokenomic's side ?

There are still diff asset would be staked on Eigenlayer : ETH ,LSD ETH,ETH LP ,LSD ETH LP. In that case,all of the value of such asset is diffenet ,what is the workflow of each part . What is the special part on your design for security ?

1. Is there NFT that the restakers can get instead of FT ? In that case,how to solve the liquidity problem? (Like on Lido,the asset is liquidable,but it is not on EL )

3.How to ensure the participants keep active beyond the slash ?

1. Will there be the bribe behavior or blockspace subscribing service happen when EL MEV service launch
2. Will it be affordable for the Hyperscale AVS ? is there any estimated cost now
