

eth_getProof

Returns the account and storage values, including the Merkle proof, of the specified account.

For Growth and Custom service plans This JSON-RPC method allows a request to be forwarded to a partner service provider if Infura should experience a service issue or outage. See [Failover protection](#) and [Enable API request forwarding](#) for complete details.

If you would like failover protection but don't qualify under your current plan, then either self-upgrade to the Growth plan or contact a sales representative to upgrade to a Custom plan.

Parameters

- address
 - : A string representing the address (20 bytes) to check for balance.
- storageKeys
 - : An array of 32-byte storage keys to be proofed and included.
- blockParameter
 - : A hexadecimal block number, or one of the string tags latest
 - , earliest
 - , pending
 - , safe
 - , or finalized
 - . See the [default block parameter](#)
 - .

Returns

- balance
 - : Hexadecimal of the current balance in wei.
- codeHash
 - : The 32-byte hash of the code of the account.
- nonce
 - : The nonce of the account.
- storageHash
 - : 32 bytes. The SHA3 of the StorageRoot. All storage will deliver a Merkle proof starting with this rootHash
 - .
- accountProof
 - : An array of RLP-serialized MerkleTree-Nodes, starting with the stateRoot-Node, following the path of the SHA3 (address) as key.
- storageProof
 - : An array of storage-entries as requested. Each entry is an object with these properties: * key
 - : The requested storage key.
 - - value
 - : The storage value.
 - - proof
 - : An array of RLP-serialized MerkleTree-Nodes, starting with the storageHash-Node, following the path of the SHA3 (key) as path.

Example

Replace YOUR-API-KEY with an API key from your [Infura dashboard](#) .
