

After [3 months of work](#) (and 7 months since we started brainstorming)[ApeTalent](#) is almost here thanks to the Ape community.

We're in the phase of finding the latest possible bugs and detection of performance problems and for this we need the help of the community. Some members are already testing it but if you want to be one of our first users, let me know here or at [Twitter](#).

Once we add you to the WL, you will be able to enter the platform and be able to fill in your profile information. We're looking forward to hearing the feedback from the community.

I have tried to add this information to the original AIP page for this proposal as an update but have not been able to add new comments to it.

Thanks in advance to everyone

UPDATE January 2, 2023:

A few days ago we released the integration with tokenproof service, so we're no longer in closed beta and you can login with any wallet you want. Any kind of feedback is more than welcome, looking forward to hearing it

[ApeTalent](#)

[@apetalentproj](#)

Security is one of the most important things in web3 projects. For that reason, today we integrate [@tokenproof](#) in our login process. In this way, if you do not want to connect your cold wallet to access ApeTalent, you can do so without any problem. <https://t.co/qdC3PCsRtL>

UPDATE January 9, 2023:

Finally we make the official release to the entire Ape community and we are no longer in beta phase.

[twitter.com](#)

[ApeTalent](#)

[@apetalentproj](#)

Today the doors of ApeTalent are finally open to the entire Ape community. Thanks to all our testers who helped us these weeks to improve stability as well as the feedback received to add new features. We're very excited to start seeing the first synergies and connections

UPDATE January 10, 2023:

Thanks to all of you and your feedback these weeks, we have been able to improve and release ApeTalent version 1.0. Here you can see a small summary of the different changes and improvements in this beta thanks to your feedback.

- Add integration with tokenproof (This is something that we did not have added in our roadmap for 1.0 but it is something many of you have asked us for and your feedback is the most important thing for us. Thanks to all of you

)

- Optimization uploading images/files in skills (thanks [@Brazy](#))
- Improve landing showing what users will find within the platform and in the future there will be sections open to the public (thanks [@supriyo](#))
- Issue using tokenproof in the login (thanks [@Nik](#) and nilzen)
- Fix issue rendering links in the cards
- Improve responsive in mobile

- As a result of the use that users gave to the platform, we made improvements in how some elements were displayed in the profile, such as “about me” (among others), so that they had more weight/importance
- Improve UI in how the tags were displayed on the cards
- Add URL support in WYSWYG editor (thanks [@Vulkan](#))
- Several UI improvements when the user does not have certain fields of their profile

Thanks to everyone to make this possible
