

Please, did anyone notice a recent change in crypto signals submission requirements? Docs write that there must be at least 100 symbols in each submission. Well, anything over 120 symbols worked till recently, and now I am repeatedly getting "not enough symbols in the submission" error for the same sample of top 120 symbols excluding stablecoins. However numerai filters it, I must now submit at least 170 symbols to get my submission accepted. Have no idea how many of them get filtered out by numerai. Apparently, same sample as a month ago (~120 symbols) is not enough any more. Did you notice anything like this? Thanks in advance for any explanation.
