

Flashloan

Balancer's Flashloan facet An additional benefit of consolidating all liquidity providers' (LPs) tokens within a single location via the Token Vault system is the potential to magnify the capacity of your available flashloans. Typically, Uniswap LPs permit flashloans where tokens in a pair are optimistically swapped in a specific format for a swap fee.

In contrast, our system facilitates the creation of flashloans of an aggregate size equal to the combined total of all LPs for a singular token within the Token Vault. This capability is available irrespective of the size of each individual pair. This unique feature enhances our platform's versatility and utility, enabling us to offer more extensive flashloan options.
