

# targetTokenPriceDecayHalfLifeOnReset()

...

Copy functiontargetTokenPriceDecayHalfLifeOnReset()externalviewreturns(uint32);

...

The auction between the targetToken->finalTargetToken allows continuous price discovery which resets after a trade on specific conditions. As long as the balance and change is within defined parameters, the price reset will slow down.

Example

...

Copy targetTokenPriceDecayHalfLifeOnReset() returns( 864000//the half life indicator in seconds )
