

Hello, today I transferred USDT and BNB from Binance to Metamask using BNB Smart Chain and then connected my Metamask wallet with Aave with the goal of supplying USDT to earn APY. Now in Aave, I see my assets when I choose the BNB Chain Market as I should, however, when I click on "Supply" for USDT, there is an error message on top saying I have to switch to BNB Smart Chain network. But I'm already in it with the corresponding tokens? Any idea what to do here?

Thanks a lot.
