

Hello,

Currently, if I get liquidated, Aave requires the service of an external actor.

The impact is then :

- I'm at loss
- No impact for the protocol
- The liquidator is winning

Why doesn't Aave liquidate my position itself?

The benefits could then :

-Go to the safety module

-Be given back to me

-Go to the \$aave holders

-etc.

Is it technically too complicated?
