

I have recently taken out a loan for USDC.e on Arbitrum V3.

Since then stable borrowing was disabled and USDC.e removed from AAVE.

Now the USDC.e position is frozen and I can't even repay the loan if I wanted to ?

I hope this situation will be resolved quickly and I want to keep my loan open for a longer period of time than just a couple days. What are the next proposals/Solutions for this ?

I can't find it anywhere. Ps, I hope this is not next Anchor Protocol. I have been monitoring AAVE for years actively but just recently I decided to use it and already this problem occurred... Thanks
