

# Welcome to the Anticapture Commission Communication Thread!

The Anticapture Commission (ACC) is mandated to represent the interests of individual delegates as a key tokenholder group and to prevent the capture of the Token House by any single tokenholder or group of tokenholders, including protocols, OP Chains, etc. This program, introduced as an experiment in Season 5, consists of high-impact delegates who meet the membership criteria outlined [here](#) and have opted in.

## Expectations

- This program is best understood as a temporary measure to increase votable supply via delegation to a targeted tokenholder group - similar to what we've done with the Protocol Delegation Program and proposed Chain Delegation Program. This is meant to be a short term delegation program that increases the voting power of our highest impact delegates.
- In exchange for receiving this delegation, Commission members will uphold the specified levels of engagement and serve the very important role of bridging communication between the Token House and Citizens' House.
- The Commission will create this bridge between Houses by filing two types of reports. The Commission has no decision making power in the Citizens' House; they may only serve as a warning system. Each report requires 4 delegate approval from Commission members to be considered valid. The Citizens' House may, of course, choose to disregard or disagree with a report.
