

At the moment \$6 288 939 worth of NMR at stake

Average 3 month return is 26%. That's 104% annually!

(not even counting for exponential grows)

Assuming that these numbers don't change Numer.ai pays out \$6M+ for developers per year.

Not counting other costs at all!

To keep management fee of the hedge fund below 2%, Numer.ai should have \$300M under management.

Is Numer.ai anywhere close to this?

Is 100% (AVERAGE!!!) return a reasonable expectation?

Isn't it a Ponzi scheme?

Or have I miscalculated something?

Thanks
