

Looking at <https://www.ethereum.org/#cancel>

E.g. the command

`listProposal(42)`

It seems that you guys don't have a lot of experience with using terminals.

I am sorry to put it so bluntly, but terminals are all about SPEED.

We use terminals because they are MUCH faster than GUI interfaces.

So, in my humble opinion, the command SHOULD be:

`list proposal 42`

- it is faster to write, contains no annoying upper cases, and is more intuitive

(list could be a function, proposal an argument, and 42 another argument)

Please consider this,

thanks.

Cheers for all your hard work!
