

As we know, the current profitability of LIDO is very good. But LDO doesn't seem to have any empowerment. Can we consider adding empowerment to LDO, such as long-term dividends, entrusted voting, etc., just like you hold stocks?

Similarly, it is recommended to add the pledge function of LDO. Although lido is a chain pledge platform, it is undeniable that a pledge function can be added to LDO. This pledge function can be used to obtain a certain percentage of dividends or other,

anyway we have to think of a good way to add empowerment to tokens that we currently have no function

If you have good ideas, please share them below, thank you
