The end of this year for Brokkr is packed with big things. Big Strategies are coming already in 2 weeks!

1. Autofarmed Bitcoin DCA
2. Delta Neutral Strategy
3. Active Risk Management
4. Integration API

Autofarmed Bitcoin DCA

This strategy will let users auto-invest and farm Bitcoin at regular intervals. All steps are automated, just deposit funds into the strategy and they are automatically invested over time. Starting with BTC but more assets will be added over time.

DCA = Dollar Cost Averaging

- Periodical investing of the same amount regardless of the asset price
- It reduces the volatility as the asset is periodically bought in all market conditions and it's not influenced by a single "bad buy"

”

1. Deposit USDC
2. The strategy automatically buys BTC.b on a weekly basis
3. After each buy, the BTC.b is deposited into a farm
4. Withdraw anytime in USDC

This way you get exposed to the Bitcoin price while getting returns from farming. When you withdraw, you get everything back in USDC.

We use the average return of Bitcoin from the last 5 years for the Yearly Returns.

Autofarmed Bitcoin DCA is coming in mid-November!
