

Forgive me if this has been asked or addressed but a quick search of the topic didn't turn up any results.

Are there concerns with regards to SCRT's privacy/encryption once Quantum Computers (QC) come on the scene? Is SCRT already quantum resistant or might it require an upgrade to the blockchain and encryption?

As far as I'm aware we're still a ways off from meaningful QCs but I didn't know if this was something already being considered in the community.

For context, I'm not a dev, or overly technical, but have been reading as much as I can put of excitement for the Secret Network and some of the applications utilizing this network.
