

Hey guys, Hope you can help but think I shafted myself somehow.

I went to the sefi tab to claim and paid for the viewing key. Went through and it was highlighted in green. Then I went back to my keplr wallet and went into the secret scrt tab. A pop up to make another key came up. So i approved it and it went through. However, when I went back to the sefi tab, it now says wrong viewing key in red. If I try to claim I just get an failed tx now. I've been looking through faq's but I can't find anything. Is there anyway to fix this or did I just screw myself?
