After we burned 45% of all tokens, we [are continuing with the plan](#) and migrating to Arbitrum. It is driven by the capability of building superior strategies and vaults on Arbitrum, including the sought-after V3 Delta Neutral Strategies. They're showing impressive metrics, with ATH TVL and a strong DeFi ecosystem we can build around.

The migration process will be smooth and the tokens will be dropped into your wallets without the need to manually link your addresses.
