

Oversight is a key function in organisations that's largely missing in DAOs. As such, we pay big sums but delivery is often underwhelming.

ArbitrumDAO seems to be organically evolving a model based on oversight committees when a grant surpasses a certain sum, with a recent example of Thrivecoin's proposal for 3mn+ ARB and an oversight committee.

I'm proposing we create some guidelines and principles for said committees to facilitate everyone's task of setting up valuable initiatives for the DAO. I have added some statements to Pol.is to facilitate this discussion:

<https://pol.is/8cwambrbmj>

If you're not familiar with Pol.is, it allows you to quickly agree/disagree with a series of statements and add your own statements for others to comment too. Give it a try
