

Reward Emissions and Emission Schedule

Reward Emissions

- RF rewards will be distributed to users who supply/borrow tokens within the protocol. Emissions will proceed to release the total supply.
- RF emissions decrease over time, with a 7% reduction per month compared to the previous emission, excluding the initial emission.
- To provide liquidity, ReactorFusion will be contributing to Velocore. Earned VC will be distributed to sRF stakers.
- For the first month, the RF supply emission rate will be equal to the borrow emission rate. After the first month, the distribution will be 10%-70%-20% for Supply-Borrow-Bribe, respectively. The rates can be adjusted to keep up with market dynamics.

Emission Schedule

For simplicity, the table below displays emissions on a monthly basis, but they are distributed exponentially. Furthermore, emissions persist beyond the 48th month. Interval DAYS Emission/ month Emission/ day Bribes/ day Lending/ day Borrow/ day

1	30	4200000	140000	28000	56000	56000	2	30	3906000	130200	26040	13020	91140	3	30	3632580	121086	24217
