

The [Relay Maintenance Committee](#) reviewed [the request from the ultra sound relay team](#) for promotion to the “must include some” list. Since MEV Boost relayed network events and relay operational performance seems to have stabilized, the RMC performed a promotion assessment for the three below mainnet relays. The assessment can be found [here](#).

- Agnostic relay
- Aestus relay
- Ultra sound relay

Manifold Finance Relay has not been considered at this time as the RMC is [awaiting the finalization of the new relay codebase](#) and its deployment to production.

## Proposal and next steps

Based on the review performed by the RMC members, no objections were noted to promoting all three the above relays to the “must use some” list. The full proposal of the RMC (to be reflected on-chain no earlier than one week from now (May 30, 2023), unless the community / DAO objects or has suggestions for improvement is):

Remove below relays from “allow list” (is\_mandatory= False)

Ultra Sound Relay (Mainnet)

Agnostic Relay (Mainnet)

Aestus Relay (Mainnet)

Add below relays to “must use some list” (is\_mandatory = True)

Ultra Sound Relay (Mainnet)

Agnostic Relay (Mainnet)

Aestus Relay (Mainnet)

NOTE: The contract does not currently support “updating” an entry, hence the necessary action is removal + re-addition into the correct list.
